Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. This office action is in response to Amendment filed on Jul. 25, 2002.
2. Claims 1-29 have been canceled.
3. Claims 30-73 have been added.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 30, 47 and 53 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01. The omitted structural cooperative relationships are: where are the first and second messages?
6. Claims 30-46, 48-52, 54-60 are rejected as being dependent on independent claims 30, 47 and 53.

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical

Art Unit: 2683

Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000.

Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

8. Claims 61-73 are rejected under 35 U.S.C. 102(e) as being anticipated by Chen (5,893,035).

Regarding claims 61-69, Chen discloses a method of transmitting message element from a slave station to a master station, (see fig.1, elements 12, 16a, and its description), comprising the step of: transmitting information with the message element regarding which ones of at least one types of processing of signal to be sent by one of the master station and an additional master station downstream from and assigned to the slave station to increase a reception quality at the slave station in accordance with measures relating to a transmission channel between the slave station and at least one of the master station and the additional master station (see abstract, figs.1-2, elements 12, 14, 16a, 16b, 26, col.6-8, and its description).

Regarding claims 70-73, Chen discloses a method of transmitting message element from a slave station to a master station, (see fig.1, elements 12, 16a, and its description), comprising the step of: transmitting information with the message element regarding which ones of at least one types of processing of signal to be sent by one of the master station and an additional master station downstream from and assigned to the slave station are supported by the slave station in a detection of the signals to be

sent to increase a reception quality at the slave station (see abstract, figs.1-2, elements 12, 14, 16a, 16b, col.6-8, and its description).
